

Abhishek Kumar Ram

Data Scientist | Data Analyst | Gen AI

+91 9123082964 | ramabhishek04102001@gmail.com | [LinkedIn](#) | [GitHub](#) | Location : Kolkata, West Bengal, India - 700129

Professional Summary

Data Scientist with a strong background in Physics and hands-on experience building end-to-end ML solutions using Python and SQL. Specialized in bridging mathematical rigor with Generative AI to drive impact in sales analytics, forecasting, and customer retention. Proven track record of automating complex workflows and translating ambiguous business challenges into measurable, data-driven outcomes.

Technical Skills

- **Programming & Databases:** Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), MySQL
- **Machine Learning:** Classification, Regression, Clustering, Time Series Forecasting, Feature Engineering, Cross-Validation, Model Evaluation
- **Deep Learning:** Neural Networks (ANN, CNN, RNN, LSTM), TensorFlow, Keras, PyTorch
- **AI & Generative AI:** Generative AI, Large Language Models (LLMs), Transformer Architecture, Prompt Engineering, OpenAI API, LangChain, AI Agents
- **Data Analysis & Core Concepts:** Statistical Analysis, Numerical Methods (Physics)
- **Tools & BI:** Power BI, Git, Jupyter Notebook, VS Code, ETL Pipelines
- **Soft Skills:** Analytical Thinking, Problem Solving, Clear Communication, Business Understanding, Team Collaboration, Continuous Learning

Education

Diploma in Data Science with Generative AI (Pursuing, Online) | Physics Wallah Institute | July 2025 - January 2026 (Expected)

- Completed specialized modules on foundational Gen AI concepts, including Transformer architecture and Large Language Models (LLMs).
- Focused coursework on building ML pipelines, model evaluation, and deployment basics.

Bachelor in Physics (Honors) | West Bengal State University | Sept 2021 - May 2025

- Relevant Coursework: Applied Mathematics, Numerical Methods, Statistics, Computational Physics
- Conducted research involving **data modeling**, statistical analytics, and **experimental data interpretation**.

Experience

Data Scientist Intern | Shamgar Software Solutions | Kolkata, India | Nov 2025 – Present |

- Developed and deployed end-to-end ML pipelines, improving model accuracy by 22% on a 50k-record dataset through optimized feature engineering and hyperparameter tuning.
- Engineered customer churn prediction models, resulting in a 20% improvement in customer retention rates.
- Automated data cleaning and preprocessing workflows using Python scripts, reducing manual workload by 30%.

Data Scientist Intern | EvoAstra Ventures | Remote | Sept 2025 – Nov 2025 |

- Assisted in data extraction and cleaning for large-scale projects, ensuring data quality while improving forecast accuracy by 15%.
- Reduced manual feature engineering effort by 30% through the implementation of efficient data processing scripts.
- Performed Exploratory Data Analysis (EDA) using Pandas and Matplotlib to identify critical trends and anomalies.

Data Scientist Intern | AISECT | Remote | July 2025 – Sept 2025 |

- Optimized machine learning models (classification, regression, and clustering) using Python and SQL to drive actionable business insights.
- Automated preprocessing pipelines and built Power BI dashboards, enhancing stakeholder decision-making efficiency by 40%.
- Tool Stack: It explicitly mentions Python, SQL, and Power BI.

Projects

Cryptocurrency Volatility Prediction | [\[CODE\]](#)

- Built Random Forest and Logistic Regression models to predict price volatility using historical trading data.
- Improved model accuracy by 18% through rigorous feature engineering and hyperparameter tuning.
- Automated data preprocessing and delivered visual risk-management insights using Matplotlib and Seaborn.
- **Skills:** Python, SQL, Pandas, NumPy, Scikit-Learn, Matplotlib, Seaborn, Feature Engineering, Model Evaluation, Data Visualization.

Myntra Review Scraper Data Analysis | [\[CODE\]](#)

- Developed a web scraper to extract customer reviews from Myntra for sentiment trend identification.
- Performed Exploratory Data Analysis (EDA) to uncover key factors influencing customer satisfaction.
- Delivered actionable marketing insights through data visualizations, supporting product improvement strategies.
- **Skills:** Python, Pandas, NumPy, Matplotlib, Seaborn, Web Scraping, Data Cleaning, Sentiment Analysis, EDA, Data Visualization

Fraud Detection System using OpenAI API and prompt chaining. | [\[CODE\]](#)

- Developed a classification model to detect fraudulent transactions, achieving a 92% F1-score.
- LLM Insight Generator: Built a separate tool using OpenAI API and prompt chaining to generate sales insights.
- **Skills :** Python, Scikit-Learn, Pandas, OpenAI API

Certifications

- Prompt Engineering with GenAI | Microsoft | 2025
- Python for Data Analysis | PwC | 2025
- SQL Fundamentals | Physics Wallah Institute | 2025
- Diploma in Data Science & Generative AI | Physics Wallah Institute | Expected Jan 2026

Achievements

- Reduced manual data processing efforts by 30% by automating data cleaning and preprocessing workflows using Python.
- Improved forecasting model accuracy by 15% through feature engineering and optimized model evaluation techniques.
- Enhanced machine learning model performance by 22% on structured business datasets using hyperparameter tuning and cross-validation.
- Delivered executive-ready dashboards in Power BI, improving reporting efficiency and decision-making turnaround time by 40%.
